

Top-up assembly consists of a flexible hose attached to a solenoid valve and a tundish.

Pneumatic tank level gauge is a simple and reliable means of monitoring efficiency

The pump controller combines the functions of a pressure switch and a flow switch

Float switch activates when the water level reaches a minimum

Pump delivery hose and cables

Special overflow trap is pre-fitted to the tank

Water from gutters passes through special filter removing organic matter giving clean water

Water enters storage tank through a calmed inlet eliminating turbulence and disturbance to sediment and float switch

High quality stainless steel pump delivers water as required
